

WOUND CARE SERVICES

Wound Care Services

Based on national statistics, approximately 5 million Americans suffer from chronic wounds each year with more than a million new cases every year. A chronic wound is a wound that does not heal or may take years to do so. Chronic wounds can be caused by a number of conditions including diabetes and circulatory problems. OakBend Medical Center is proud to provide state-

of-the-art therapy and advanced wound healing technology with scientifically proven treatment protocols and a level of service that continues to set national standards of excellence. While we focus on delivering advanced wound care, the comfort and needs of our patients are always the primary focus of our team.

Types of Wounds We Manage:

- Diabetic Ulcers
- Pressure Ulcers
- Bone Infections
- Gangrene
- Post-Operative Infections
- Non-Healing Surgical Wounds
- Vascular Ulcers
- Radiation Burns
- Any wound present for more than 30 days that has failed to respond to conventional treatments

Benefits of Hyperbaric Oxygen Treatment:

- Increased oxygen delivery to wound or injured tissue
- Greater blood vessel formation
- Increased speed of wound healing
- Preservation of damaged tissue
- Elimination of toxic substances from the wound
